Kamps, blasting and painting

Kamps Straalbedrijf has been engaged in the blasting and preserving of numerous objects since 1972. Our clients include industrial, offshore and petrochemical companies as well as individuals.

Kamps Straalbedrijf specializes in:

- Blasting metal and glass
- Glass pearl blasting
- Dry-ice blasting
- Torbo blasting
- Vacuum blasting
- High resistance metallization
- Powder coating
- Electrostatic Painting
- Airless Painting
- Airmix Painting
- High volume low pressure pneumatic (hvlp)
- Polyurea Hot Spray

We work in accordance with customer prescribed specifications, like Norsok and NACE. Kamps also has enough knowledge and experience to inform the customer about paint systems that are compatible with the required specifications.

Kamps has qualified and certified employees. By using modern measuring and testing equipment, we can safeguard the conditions and quality of our work. With our in-house developed digital quality management system, we continuously monitor the progress of every project, from intake to testing and delivery. This means your project is in safe hands with us. If desired, we can provide a traceable report of every step to our clients.

Total Solutions

Together with our sister companies, Hoondert and Martens Cleaning, we can transport, lift and clean large objects before we paint them. Because of this versatility we can take on your projects on a turn-key basis.

Two locations

Kamps Straalbedrijf operates from two different locations, namely Heinkenszand and Kats.

Heinkenszand

Our Heinkenszand location is situated right next to the A58 motorway and has excellent connection to the road network. At this location we can blast, metalize, paint and powder coat.

Kats

Our location in Kats borders deep water. At this location we have two cranes with a lifting capacity over water or land of 750 tons each. We can blast, metalize and paint objects measuring up to 18 meters wide, 45 meters long and 6 meters high and weighing up to 600 tons here.

We also have a storage site covering an area of 8,5 acres here, where we can temporarily store your finished as well as unfinished materials.
